FAX TRANSMISSION

Mr Barrie Carlsen, president
Ms Donna Herringer, sales director
QUEST Vitamin Supplies Ltd.
Vancouver, B.C.

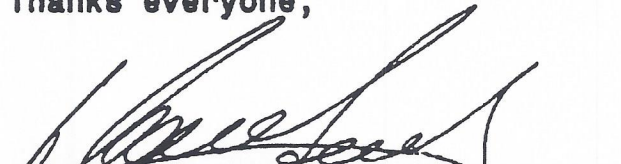

Dear Barrie,

I will be sending you a written profile of a patient, M.S., five year old female who was given six months to live: liver enzymes at up to ten times the norm, inflammation of the gall bladder and Crohn's disease. A social worker was sent to support the family and prepare for the child's passing away. After three weeks on Q37 for the liver and NAG for Crohn's, KYOLIC LIQUID GARLIC and SUPER FOOD CONCENTRATE as support formulae; liver enzymes were down more than fifty percent, the first time they went down in three years !

After another three weeks, enzyme levels are down to near normal levels, bleeding during bowel movements and diarrhoea have disappeared and the social worker has been told by the attending specialists that she will no longer be needed, M.S. will live ! I think this case history will be very useful with our professional clients.

Furthermore, it can help us realise part of the reason we are working in this industry and with QUEST... every employee who works for QUEST has contributed to some extent in saving M.S. from the dreadful prognosis that was initially formulated by the medical staff at the children's hospital...

Thanks everyone,

~~Daniel J. CRISAFI, ND, PhD~~
